CLAIMS

Please amend the claims as follows:

 $1. \ \ (Currently \ amended) \ \ A \ method \ of \ representing \ allocation \ of \ storage \ unit \ capacity$

within an audio/video (AV) recording device, comprising:

identifying a quantity of AV program data stored on said storage unit;

obtaining a storage schedule for new AV program data comprised of first AV

program data and second different AV program data defined over a predetermined time

period;

obtaining a deletion schedule for old AV program data defined over said

predetermined time period; and

producing temporally dynamic indicia representative of allocation of said capacity

of said storage unit over said predetermined time period in response to said quantity of

AV program data, said storage schedule, and said deletion schedule.

2. (Original) The method of claim 1, further comprising:

displaying a pictorial representation of said temporally dynamic indicia on a

display device in communication with said AV recording device.

3. (Original) The method of claim 1, wherein said step of producing comprises:

(a) selecting a time;

(b) determining a storage configuration of said storage unit in response to said

3

quantity of AV program data, said storage schedule, and said deletion schedule at said

selected time;

Document No.: 3682818

(c) repeating said steps (a) and (b) to determine a plurality of storage

configurations for a respective plurality of times; and

(d) combining said plurality of storage configurations to form said temporally

dynamic indicia.

4. (Original) The method of claim 3, further comprising:

successively displaying pictorial representations of said plurality of storage

configurations on a display device in communication with said AV recording device to

define a graphical animation.

5. (Original) The method of claim 4, wherein said graphical animation comprises a pie

chart.

6. (Original) The method of claim 1, further comprising:

modifying a recording configuration of said AV recording device in response to

said temporally dynamic indicia; and

re-producing said temporally dynamic indicia in response to said modified

recording configuration.

7. (Original) The method of claim 6, wherein said step of modifying comprises at least

of:

increasing compression ratio of an AV program stored on said storage unit; and

4

Document No.: 3682818

increasing compression ratio of an AV program scheduled for storage on said storage unit.

- 8. (Original) The method of claim 6, wherein said step of modifying comprises: deleting an AV program stored on said storage device.
- (Original) The method of claim 6, wherein said step of modifying comprises: archiving an AV program stored on said storage device.
- 10. (Currently Amended) A computer readable storage medium including program instructions that instruct a computer to perform a method of representing allocation of storage unit capacity within an audio/video (AV) recording device, comprising:

 identifying a quantity of AV program data stored on said storage unit;

 obtaining a storage schedule for new AV program data comprising first AV program data and second different AV program data defined over a predetermined time period:

obtaining a deletion schedule for old AV program data defined over said predetermined time period; and

producing temporally dynamic indicia representative of allocation of said capacity of said storage unit over said predetermined time period in response to said quantity of AV program data, said storage schedule, and said deletion schedule.

App. Ser. No.: 10/743,246

Atty. Doc. No.: BCS03192

11. (Previously presented) The computer readable storage medium of claim 10, further

comprising:

displaying a pictorial representation of said temporally dynamic indicia on a

display device in communication with said AV recording device.

12. (Previously presented) The computer readable storage medium of claim 11, wherein

said pictorial representation is a pie chart.

13. (Previously presented) The computer readable storage medium of claim 10, further

comprising:

modifying a recording configuration of said AV recording device in response to

said temporally dynamic indicia; and

re-producing said temporally dynamic indicia in response to said modified

recording configuration.

14. (Currently amended) An apparatus for representing allocation of capacity of a

storage unit within an audio/video (AV) recording device, comprising:

means for identifying a quantity of AV program data stored on said storage unit;

means for obtaining a storage schedule for new AV program data comprising first

AV program data and second different AV program data defined over a predetermined

time period;

means for obtaining a deletion schedule for old AV program data defined over

said predetermined time period; and

App. Ser. No.: 10/743,246

Atty. Doc. No.: BCS03192

means for producing temporally dynamic indicia representative of allocation of

said capacity of said storage unit over said predetermined time period in response to said

quantity of AV program data, said storage schedule, and said deletion schedule.

15. (Original) The apparatus of claim 14, further comprising:

means for displaying a pictorial representation of said temporally dynamic indicia

on a display device in communication with said AV recording device.

16. (Original) The apparatus of claim 15, wherein said pictorial representation is a pie

chart.

17. (Original) The apparatus of claim 14, further comprising:

means for modifying a recording configuration of said AV recording device in

response to said temporally dynamic indicia; and

means for re-producing said temporally dynamic indicia in response to said

modified recording configuration.

18. (Original) The apparatus of claim 17, wherein said means for modifying comprises at

least of:

means for increasing compression ratio of an AV program stored on said storage

unit; and

means for increasing compression ratio of an AV program scheduled for storage

on said storage unit.

19. (Original) The apparatus of claim 17, wherein said means for modifying comprises: means for deleting an AV program stored on said storage device.

20. (Original) The apparatus of claim 17, wherein said means for modifying comprises: means for archiving an AV program stored on said storage device.

Document No.: 3682818
